All About The 1965 Society

LighthousePointLibrary.com

THE 1965 SOCIETY

The 1965 Society is open to all and is composed of individuals, foundations, families, businesses, and service groups who invest their time, talent, and resources in the Lighthouse Point Library.

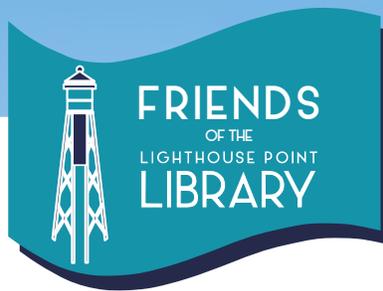

The name of the society honors the Library's founding year and was created in 2015 to commemorate its 50th Anniversary.

In appreciation of their investment in the Library, each donor is represented with a marine animal on the society wall. The donors' engraved marine life plaques not only correspond to donation levels but also represent animals that make their homes off the Florida coast. Volunteers with more than 20 years of service at the Library are also celebrated on the society wall.

Through field trips, fun discussions, and crafty handouts children who visit the 1965 Society Wall will learn about Florida marine life, coastal recycling, oceanography, and the importance of giving back to one's community.

In 2018, the Florida Library Association (FLA) awarded the Friends of the Library's 1965 Society Wall the Association's Special Projects Award.

MEMBERSHIP LEVELS

SEA STAR or Starfish or Cushioned Sea Star (*Oreaster reticulatus*)

In honor of 20 years of volunteer service

Are large with a central disc surrounded by five short, tapered arms. They have a thick body covered by a hard shell with raised knobby spines. The juveniles are mottled green, a color which they use as camouflage in their seagrass bed refuge. The color of adults can be brown, orange, red, or yellow. Adults are usually found in calm shallow waters that have sandy bottoms. A full grown adult can reach 20 inches in diameter. Adults are usually found in calm shallow waters that have sandy bottoms.

ANGELFISH French Angelfish (*Pomacanthus paru*)
In honor of the \$1,000 Donor Level

Are flat, oval shaped fish have large trailing fins. They are generally dark blue to black with their body scales edged in bright yellow. They have yellow pectoral fins, white around their mouths, and yellow around their eyes. French angelfish live in coral reef areas that offer shelter from nocturnal predators. Adult French Angelfish can reach a maximum length of 24 inches and form monogamous breeding pairs which are territorial to their home where they mate for life.

THE 1965 SOCIETY

MEMBERSHIP LEVELS

SEA TURTLE Loggerhead Sea Turtle (*Caretta caretta*) In honor of the \$5,000 Donor Level

Loggerheads, the most common sea turtle type found in Florida, are named for their massive, block-like head. They are among the larger sea turtles; adults weigh an average of 275 pounds with a shell length of about 3 feet. Its carapace, which is a ruddy brown on top and creamy yellow underneath, is very broad near the front of the turtle and tapers toward the rear. A slow swimmer compared to other sea turtles, the loggerhead compensates for its lack of speed with stamina; for example, a loggerhead that had been tagged at Melbourne Beach was captured off the coast of Cuba 11 days later.

DOLPHIN Bottlenose Dolphin (*Tursiops truncatus*) In honor of the \$10,000 Donor Level

Dolphins are mammals, not fish. Mammals, unlike fish, feed their young with milk that is produced in the mother's body. Also unlike fish, dolphins have lungs and are warm-blooded. Many people believe that dolphins rank among the most intelligent animals, along with chimpanzees and dogs. Bottlenose dolphin, the best-known species, are found year-round off the coast of Florida. Members of this species measure up to 13 feet long and can weight as much as 600 pounds. They are gray, but their backs are darker than their underside. Its short beak gives this dolphin an expression that looks like a smile. Some Bottlenose dolphins show friendliness toward people, and they often swim alongside vessels.

MEMBERSHIP LEVELS

MARLIN Atlantic Blue Marlin (*Macaira nigricans*) **In honor of the \$15,000 Donor Level**

Blue marlins inhabit the Atlantic, Pacific, and Indian oceans. It is a powerful game fish that has a long, pointed bill, a sickle shaped dorsal fin and a crescent-shaped tail. They have strength, spectacular leaping ability, and can swim up to 50 miles an hour in short bursts. Most grow 6 - 9 feet long and weigh 50 to 400 pounds. However, some marlins may reach up to 14 feet in length and weigh over 1,500 pounds.

MANATEE West Indian Manatee (*Trichechus manatus*) **In honor of the \$20,000 Donor Level**

Also called sea cow, the manatee is a large, plant-eating water mammal. Like other grazing animals, Florida manatees play an important role in plant growth in the shallow rivers, bays, estuaries, canals and coastal waters where they live. The manatee has light gray to dark gray skin with hairs scattered over its body. It has paddle-shaped front limbs, a rounded tail, and no hind legs. Some manatees reach 13 feet long and weigh more than 3,500 pounds. Manatees are vulnerable to cold. They move to warmer areas when water temperatures drop below 68 °F.

WHALE North Atlantic Right Whale (*Eubalaena glacialis*) In honor of the \$25,000 Donor Level

This whale migrates between Florida/Georgia (their winter calving and feeding area) and Canada/New England (their summer feeding and nursery grounds). They have stocky black bodies, with no dorsal fin, and “white” callosities on their huge heads. Adults weight up to 79 tons (158,000 pounds) and are about 50 feet long; calves are about 14 feet at birth. Right whales swim slowly and feed by swimming into a masses of plankton with their mouths open. Water flows through thick fibers on their upper jaw (baleen), and plankton becomes entangled in it. They can live at least 70 years, but there are few data on the longevity of right whales. As of 2023 the North Atlantic Right Whale is one of the most endangered species on the planet with only 350 North Atlantic Right Whales remaining.

Members may move from one level to the next by contributing between their recorded 1965 Society donation amount and the base amount of the next donor level

Your Personalized 1965 Society Plaque

There is a maximum of 38 slots of text or spaces per animal; so the more slots used, the more lines of text will be needed, and the smaller the font will be. Above are examples of an angelfish with 16 slots used (The Smith Family), and 37 slots used (In Loving Memory of John and Ann Smith). Below is an example of how to fill out the form. Due to space limitations, very long names or words may be split between two lines. If needed the designer may substitute symbols for words such as "& for and" or abbreviate words such as "co. for company". Plaques are added to the wall after all payments are made. Placements of new plaques are done annually and may require the rearrangement of existing layouts. The Friends of the Lighthouse Point Library reserve the right to edit, veto, or remove any donor text or name for any reason, at any time, without notice or prior consent.

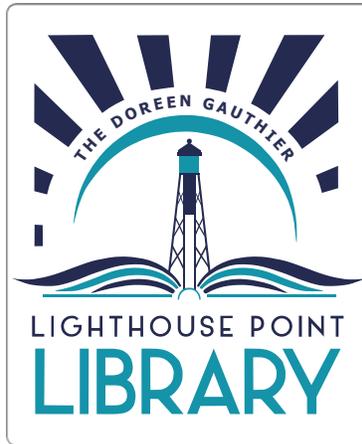

Your choice of text below sample. Remember to shade in blank spaces
